Description:
iTinerary is an app aimed to relieve some of the stress of planning a vacation. People want to make the most out of their vacation travels and this ends up making planning a vacation one of the most stressful tasks we encounter. One problem I found I was having while planning for vacations is a lack of a centralized place to story a high level view of my travel details so that I could see a top-down view of my vacation plans and plan accordingly. I had resorted to using messy text editors with screen shots of google maps and haphazard notes but this just seemed to make the problem worse.

To solve this problem I came up with iTinerary. Itinerary is a mobile itinerary which lets you enter all your travel details and have them saved onto your phone so that you can view and edit your itinerary on the go. iTinerary lets you choose multiple stopping locations for your travels and for each stopping location lets you select sights/locations you are interested in visiting and where your accommodations are for that city. By Using the Apple Maps api, iTinerary lets you see your entire travel plan in an easy to understand format on interactive maps.

Using iTinerary, you no longer need to worry about organizing your travel plans or forgetting a location you wanted to visit or accommodation you were staying at. iTinerary will also allow you to plan your vacation days with optimal time management by using Apple Maps to plan your day.
